1. Introduction

I worked on a Food Delivery Business Performance and Profitability dashboard using Power BI. The goal of this project was to analyze business performance and identify factors affecting profit and customer satisfaction."

2. Business Problem

The business was facing inconsistent profit and moderate customer satisfaction levels. Management wanted to understand:

- Which cities generate highest profit
- How discount strategies affect profit
- Whether delivery time affects customer satisfaction
- Whether restaurant quality impacts profitability

This analysis would help them improve business performance.

3. Assumptions

For this case study, I made the following assumptions:

- The dataset represents real business operations
- Profit is the key performance indicator
- Customer rating represents customer satisfaction
- Restaurant rating represents service quality
- Delivery time impacts customer experience

4. Objective

The objective was to analyze profit trends, customer satisfaction, and operational efficiency using Power BI and provide business recommendations.

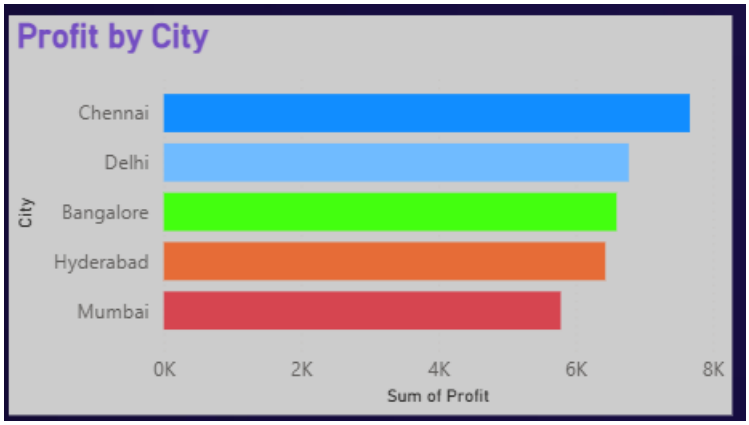
5. Dashboard Overview

I created an interactive Power BI dashboard with KPI cards and visualizations such as:

- Profit by City
- Profit by Discount Range
- Monthly Profit Trend
- Customer Rating vs Delivery Time
- Profit by Restaurant Rating"

6. Key Insights (Based on your dashboard)

Insight 1: Profit by City



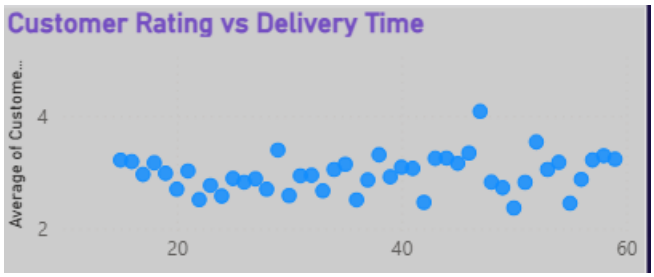
Chennai generated the highest profit, while Mumbai generated the lowest.

Insight 2: Impact of Discount

Orders with low discounts generated higher profit, while high discounts reduced profit.

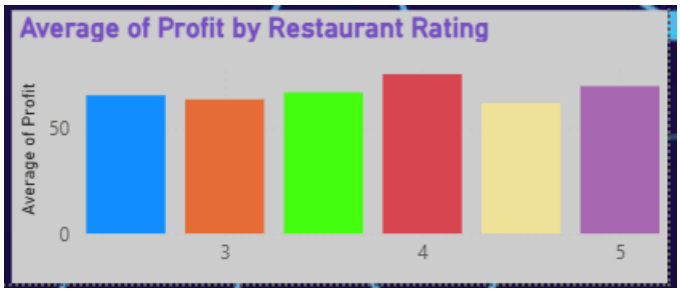
Insight 3: Delivery Time Impact

Longer delivery time slightly reduced customer satisfaction.

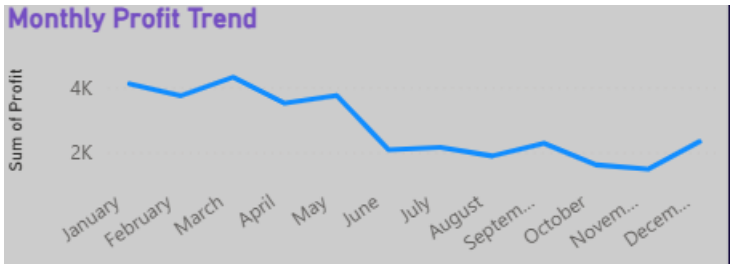


Insight 4: Restaurant Rating Impact

Higher-rated restaurants generated higher profit.



Insight 5: Monthly Trend



Profit declined mid-year and increased later, indicating seasonal variation.

7. Business Recommendations:

Based on my analysis, I recommended:

- Reducing excessive discount offers
- Expanding business in high-performing cities
- Improving delivery efficiency
- Partnering more with high-rated restaurants

8. Conclusion:

This dashboard helps management make data-driven decisions to improve profitability and customer satisfaction.
